

What is claimed is:

1. A microorganism belonging to the family Acetobacteracea, which has a 16S rRNA gene comprising a nucleotide sequence of SEQ ID NO: 1 or a nucleotide
5 sequence equivalent to the nucleotide sequence of SEQ ID NO: 1 from the viewpoint of molecular taxonomy based on the 16S rRNA sequence, and has an ability to produce xylitol or D-xylulose from glucose.
- 10 2. The microorganism of claim 1 which belongs to the genus *Asaia*.
3. The microorganism of claim 2 which is a strain of *Asaia ethanolifaciens*.
- 15 4. A microorganism which has a 16S rRNA gene comprising a nucleotide sequence of SEQ ID NO: 2 or a nucleotide sequence equivalent to the nucleotide sequence of SEQ ID NO: 2 from the viewpoint of molecular
20 taxonomy based on the 16S rRNA sequence, and has an ability to produce xylitol or D-xylulose from glucose.
5. The microorganism of claim 4 whose 16S rRNA gene comprises any one of the nucleotide sequences of
25 SEQ ID NOS: 3-5.
6. The microorganism of claim 4 which belongs

to the genus *Zucharibacter*.

7. The microorganism of claim 4 which is a strain of *Zucharibacter floricola*.

5

8. A microbial strain P528 (FERM BP-6751) having an ability to produce xylitol or D-xylulose from glucose.

10

9. A microbial strain S877 (FERM BP-6752) having an ability to produce xylitol or D-xylulose from glucose.

15

10. A microbial strain S1009 (FERM BP-6753) having an ability to produce xylitol or D-xylulose from glucose.

20

11. A microbial strain S1019 (FERM BP-6754) having an ability to produce xylitol or D-xylulose from glucose.

25

12. A microbial strain S1023 having an ability to produce xylitol or D-xylulose from glucose (FERM BP-6755).

13. A method for producing xylitol or D-xylulose, which comprises culturing a microorganism having an

ability to produce xylitol or D-xylulose from glucose in a suitable medium to accumulate xylitol or D-xylulose in the medium, and collecting xylitol or D-xylulose from the medium.

5

14. The method of claim 13 wherein the microorganism is a microorganism of any one of claims 1-12.

10

15. A method for producing ethanol, which comprises culturing a microbial strain P528 (FERM BP-6751) in a suitable medium to accumulate ethanol in the medium, and collecting ethanol from the medium.
